THE CORN BORER

Thrives on corn—all varieties.

Feeds on all parts of corn plant except roots.

Moth comes out and lays eggs under side of corn leaves—June and July.

Worm hatches from egg in 6 to 10 days.

Young worms bore into stalk for food and shelter.

Worm tunnels up and down stalk and into ear.

30 to 40 borers per stalk destroy whole crop.

Borer spends fall, winter, and spring in corn stalks, cobs, and stubble.

KILL PEST IN WORM STAGE BEFORE MAY
